

Greenfix Brushwood Faggots

Hazel, Chestnut & Willow (live) Faggots are for use in both freshwater and brackish intertidal applications.

Faggots are manufactured from (FSC) sustainable sources within the UK's coppice industry; they provide an excellent solution to many scour problems below water level around lake & pond edges, rivers and streams. Faggots often form part of a bioengineering design in conjunction with coir rolls, coir pallets, rock-rolls, coir blankets & embankment mats. Whilst offering a proven erosion control system faggots help to support a green & healthy environment at the water's edge for wildlife & invertebrates.

Brushwood Faggots		
Ref: GFF22	200mm x 2m Long Faggots	4kg per 1m
Ref: GFF32	300mm x 2m Long Faggots	6kg per 1m
